### Azumah reports gold intersections from Wa project

29 June 2009

Azumah Resources Ltd (ASX:AZM) has announced that shallow, high-grade gold intersections have been received from a recently completed reverse circulation (RC) drilling program at its new Wa project in northwest Ghana.

At the Collette prospect, a reconnaissance drill campaign returned a high-grade gold intersection of 12m at 13.13g/t gold from 24m, including 3m at 45.90g/t gold (approx. 1.5 ounces gold per tonne) (ACORC004) associated with laminated quartz veins containing visible gold mineralisation. Strike extensions of this particular area have had very limited testing.

Previous work at Collette had returned high-grade rock chip samples, grading up to 15.2g/t gold, and drill intersections including 14m at 3.53g/t gold from 21m and 11m at 4.37g/t gold from 39m.

Field reconnaissance has discovered additional untested mineralised quartz veins in the immediate prospect area.

Better intercepts include:

- \* 12m at 13.13g/t gold from 24m - ACORC004 - Collette, incl 3m at 45.90g/t gold from 24m;
- \* 1m at 16.20g/t gold from 60m - ACORC002 - Collette;
- \* 13m at 2.78g/t gold from 10m - AJRC027 - Julie;
- \* 2m at 8.96g/t gold from 21m - AJRC028 - Julie;
- \* 3m at 5.03g/t gold from 52m - AJRC032 - Julie
